Durable.
- High density, foamed-in-place, one-piece cabinet provides maximum degree of structural integrity.
- Units can be stacked three high optimizing inventory storage space—proof of cabinet strength.
- Grill made of heavy gauge steel for durability.

Easy to Maintain.
- Slide in/out refrigeration module allows for ease of cleaning and replacement.
- Temperature control not visible to loader or customer, discouraging unnecessary adjustment.
- NSF certified, UL listed and designed for low power consumption to meet today’s and tomorrow’s agency requirements.
- Lamp shield protects packaged food in the cooler in case of accidental lamp breakage.
- No exposed wiring on outside of cooler optimizing safety and cosmetic appearance.
- Two piece power cord for ease of replacement if ever needed.
- Refrigeration compartment grill easy to remove and replace for cleaning and servicing access.
- ENERGY STAR® Tier 3 compliant.

Easy to Load.
- Torsion Pak holds door in open position for ease of loading.
- Easily reversible doors to meet location requirements.

Shelving and door options.
- Standard 6-shelf model with full-length glass door with decal at top, and 20% greater storage capacity.
- Also available in 5-shelf model with separate, lighted, and customizable sign header above door.
- Beverage can/bottle shelf guides available upon request.

**Health Timer Lock Mechanism**

Royal Vendor’s Health Timer lock, an automatic mechanical and electronic locking mechanism, prevents customers from taking food items out of the cooler if the cooler temperature rises above 41°F for a predetermined period, following FDA and NSF guidelines for potentially hazardous prepackaged foods.

This safety measure is being followed by health departments in many areas and is expected to become more frequently enforced as Micro-Market, and other unattended operations increase in popularity.

Royal Vendor’s “smart” software allows for loading the cooler without activating the Health Timer lock, and should the cooler be locked because of a temperature increase, a field technician can easily open the cooler for servicing.
